# HISTORY

For many years **Pentax** has held a large share of the world market for motorized pumps. The sales department is constantly working to better serve existing customers and to open up new markets. This is possible thanks to the wide range of products available which allows to cover most of the applications in the pump field. Special attention is also paid to market surveys, so that any new requirements can be immediately transferred to the research and development department: the best way to properly develop and forecast future scenarios.

# MISSION

After more than **20 years of activity** we can finally trace the guidelines that have governed and directed the industrial development of **Pentax Industries SpA**. Actions and processes that have intersected with the obvious aim of creating value, benefits to be redistributed to the various components of the production and distribution process.

A rational allocation of available resources, together with a refined program of production decentralization have allowed the company to adapt to changing market conditions, each time with extreme rapidity.

Maximum attention to the markets, therefore, with the commitment to respond in real time to the specific needs of the different markets, paying particular attention to technological progress. All this in the perspective of a careful policy for **customer satisfaction**.

### ANNEX II

«The benchmark for most efficient water pumps is  $MEI \geq 0,70$ ».

«The efficiency of a pump with a trimmed impeller is usually lower than that of a pump with the full impeller diameter. The trimming of the impeller will adapt the pump to a fixed duty point, leading to reduced energy consumption. The minimum efficiency index (MEI) is based on the full impeller diameter».

«The operation of this water pump with variable duty points may be more efficient and economic when controlled, for example, by the use of a variable speed drive that matches the pump duty to the system».

Information on benchmark efficiency is available at:

[www.europump.org/efficiencycharts](http://www.europump.org/efficiencycharts).

Horizontal booster pump with variable speed

## DESCRIPTION

Horizontal pump of ULTRA series provided with the single-phase variable speed drive EPIC. This booster pump assure the desired pressure regardless changes on flow demand making it suitable for low or missing pressure in domestic systems. A membrane tank downstream the system is required.

## FEATURES

- EPIC variable speed drive provided on board
- Horizontal pump of ULTRA series
- Pressure sensor
- Cable with plug

## FUNCTIONING

If the pressure in the network drops the pump will starts and gradually speeds up to provide with the set pressure. When the water demand decreases, the pressure will rise causing the pump speed to slow down and eventually to stop the pump if demand ceases. The pump will remain on standby waiting to start at the next water demand.

## SELECTION

The table below shows the horizontal ULTRA pump models available for the assembly with EPIC. Consult the catalog at the ULTRA series for pump specifics and characteristic curves.

Vertical booster pump with variable speed

## DESCRIPTION

Horizontal pump of ULTRA series provided with variable speed drive EPIC or IPFC. This booster pump assure the desired pressure regardless changes on flow demand making it suitable for low or missing pressure in residential systems and industrial applications. It is required the installation of a membrane tank downstream the system.

## FEATURES

- EPIC or IPFC variable speed drive
- Vertical pump of ULTRA series
- Pressure sensor wired to the vsd
- Cable with plug for EPIC vsd only

## FUNCTIONING

If the pressure in the network drops the pump will starts and gradually speeds up to provide with the set pressure. When the water demand decreases, the pressure will rise causing the pump speed to slow down and eventually to stop the pump if demand ceases. The pump will remain on standby waiting to start at the next water demand.

## SELECTION

The table below shows the vertical ULTRA pump models available for the assembly with EPIC or IPFC. Consult the catalog at the ULTRA series for pump specifics and characteristic curves.

Aquadomus is an integrated 'Plug&Play' system to manage water pressurization for domestic and residential applications. The electronic control (E-IPFC) manages the operation of the system in order to maintain the pressure constant even if the conditions of use change. It can be driven and monitored by a dedicated app "Pentax IPFC". It consists of a multistage pump, a permanent magnet synchronous motor, an electronic inverter control, an expansion tank, a no return valve, a pressure sensor, a cable with plug.

# SUPERDOMUS+VSD

Booster set

## Variable speed booster pump set with membrane tank

### DESCRIPTION

SUPERDOMUS+VSD are compact and automatic booster sets consisting of one single-phase variable speed drive EPIC and one three-phase horizontal pump with a membrane tank. They provide constant pressure regardless changes on flow demand, making them suitable for low or missing pressure in domestic systems and small industrial applications.

### FEATURES

- EPIC variable speed drive provided on board, with single-phase power supply
- Three-phase horizontal pump
- 5-way AISI304 connector with built-in non return valve
- Pressure sensor wired to EPIC
- Pressure gauge
- 8 liters membrane surge tank
- Cable with plug

### FUNCTIONING

If the pressure in the network drops the pump will start and gradually speeds up to provide with the set pressure. When the water demand decreases, the pressure will rise causing the pump speed to slow down and eventually to stop the pump if demand ceases. The pump will remain on standby waiting to start at the next water demand.

### SELECTION

The table below shows the pump series available as SUPERDOMUS+VSD. Consult the catalog at the relative series for pump specifics and characteristic curves.

# BOOSTER SET ULTRA

Booster set

## Fixed speed booster set with two or three pumps

### DESCRIPTION

Fully automatic booster sets for water supply equipped with 2-3 fixed speed pumps, control panel, pressure switches, all fixed on a single frame for easy installation. These booster sets are suitable for water network supply in housing complexes, offices, hotels, shopping centers, industrial plants and for irrigation. It is recommended the installation of a membrane tank.

### FEATURES

- Horizontal or vertical pumps of Ultra series
- Suction galvanized steel manifold with non-return and isolation valves
- Delivery galvanized steel manifold with pressure gauge, isolation valves and pressure switches
- Base frame in painted steel
- Electronic or electromechanical panels for pump's control and protection
- Pressure tanks available on request, as accessory

### FUNCTIONING

As soon as pressure drops below the minimum pressure set on a pressure switch, the first pump starts automatically. If water demand further increases, the second pump (and third if present) will run until the pressure rises above the maximum pressure set on the pressure switches. When demand ends, the last pump fills up the membrane tank and then turns off. All the pumps follow cycling changeover for equal work distribution. In case of one pump failure, the other pumps would continue to operate.

# BOOSTER SET ULTRA+VSD

Booster set

## Variable speed booster set with one to three pumps

### DESCRIPTION

The booster sets ULTRA + VSD are fully automatic systems equipped with two (2U+VSD) or three (3U+VSD) speed-controlled pumps. The booster sets ULTRA + VSD deliver the highest comfort level on domestic, agricultural and industrial applications ensuring constant pressure, low energy consumption and protection against overload and dry running. Required the installation of a membrane tank.

### FEATURES

- Horizontal or vertical pumps
- Inlet and outlet galvanized steel manifolds (inox as option)
- Base frame in painted steel
- Non-return valves on suction side, one per pump
- Isolating valves, two per pump
- Pressure gauge
- Variable speed drive, one per pump
- Outlet-pressure sensors, one per pump
- Breaker box
- On request membrane tanks (not connected)

### FUNCTIONING

When the system pressure drops below the desired level, the sensors detect it giving an input to the VSD to start the first pump at controlled speed. If the flow rate were not sufficient, the pressure continue to drop causing the second and the third pump to start. As soon as the flow demand decreases, the pressure rises again and the second and third pumps stop. The first pump continues to modulate its speed in order to regulate and maintain the set pressure until it turns off when the flow demand ends.

Based on working hours, VSDs will alternate the starting order of pumps to ensure better wear distribution. Continuity of operation is ensured in the event of one pump or one VSD failure.

### DRIVES

- EPIC drive with single-phase input voltage, suitable for pumps up to 2kW
- IPFC\*\* drive with single-phase input voltage up to 3 kW
- IPFC\*\* drive with three-phase input voltage up to 45 kW

\*\* control and monitor the pump via Pentax IPFC App for mobile

# DEEPWELL BOREHOLE PUMPS

- **5PES, 4S/A, 4L, 6L lines:** 4", 5" and 6" electric well pumps with polymer hydraulics and pressed steel body. Coupling to the motor according to Nema flange.
- **6- 8- 10LMG lines:** 6", 8" and 10" electric well pumps with cast iron hydraulics. Non-return valve in the delivery port and motor coupling according to Nema flange.
- **LM, LRS and 14E lines:** 6", 8", 10", 12" and 14" electric well pumps manufactured with a micro-casting process that allows to obtain very smooth hydraulic surfaces and therefore high hydraulic efficiency values, all combined with a high mechanical resistance thanks to the cast steel structure. The range is available in AISI304, AISI316 and Duplex steel types with flow rates up to 860m<sup>3</sup>/h and 800 m maximum head. The check valve is incorporated in the delivery port, while coupling with the motor is ensured by NEMA flanging.

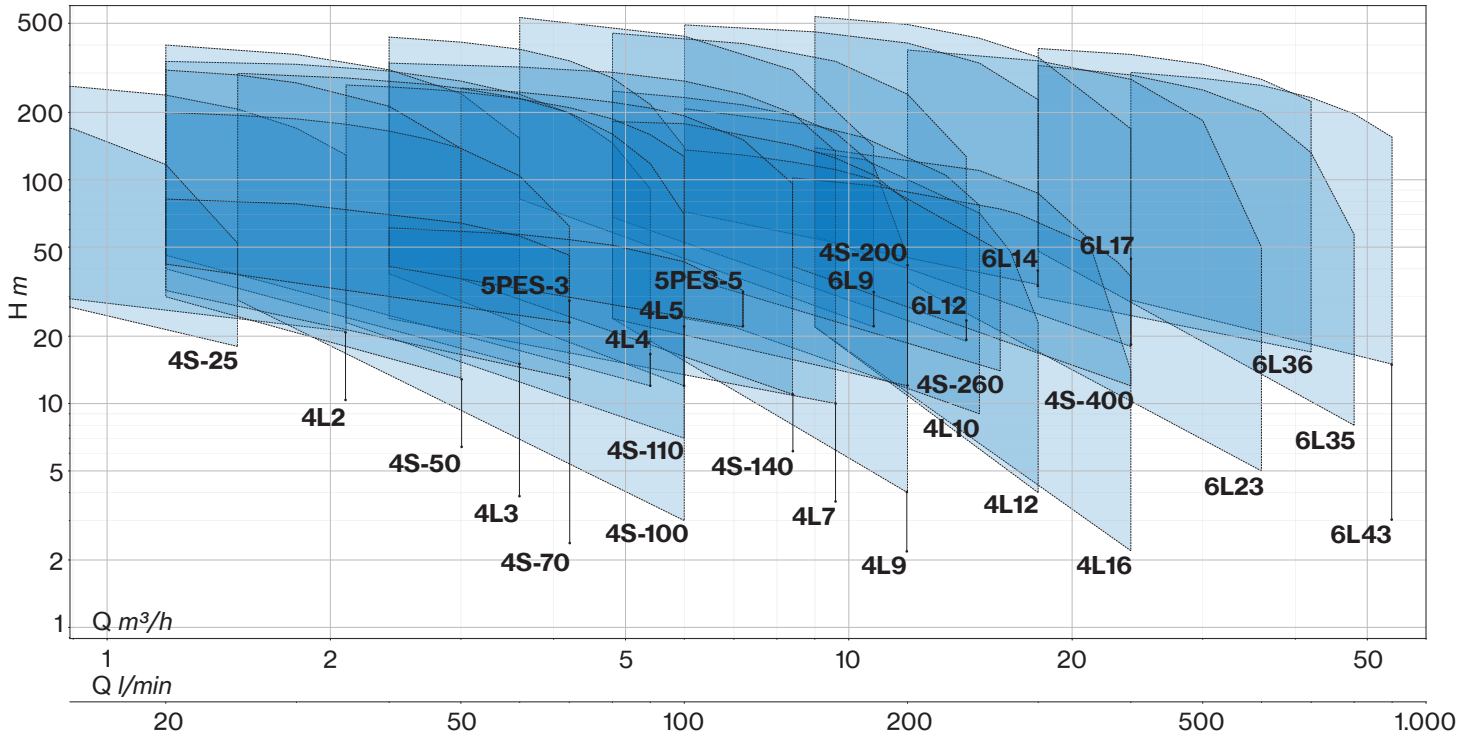

## Applications:

- Water supply for civil and industrial uses
- Distribution in aqueducts
- Agricultural irrigation
- Installation on wells and groundwater withdrawal
- Reverse osmosis plants

# HP SERIES

The multistage centrifugal pumps belonging to the HP series have a radial cross section, allowing an horizontal or vertical installation. The flanges of the suction and discharge ports are according to the EN or ANSI standards, these ports can operate radially and can be rotated 90°, in the HP, HPM and HPR models, or have an axial suction port for the HPA and HPMA models. This family of pumps is designed to operate in heavy duty conditions and with very high pressures (up to 100 Bar for the HPR versions) and with temperatures up to 180°C. The great choice of materials, the different kinds of sealing on the shaft and the various lubrication solutions for the pump's bearings, make this line very versatile and ideal for many uses in the industrial, energy and water processing fields.

## Applications:

- Boiler feeding
- Water desalination by Reverse Osmosis
- Geothermal plants
- Service installations in the petrochemical sector

# HP SERIES

## PERFORMANCE RANGE

## Main characteristics

- Flow rates up to 1200 m<sup>3</sup>/h
- Pressure up to 1000 m
- High hydraulic efficiency, up to 80%
- Balancing drum, placed on the discharge casing, which effectively compensates the axial thrust produced by the impellers
- Versatile sealing system: which is available as packing, single Mechanical or Balanced Mechanical, other special types upon request
- The pumps' bearings are available with grease or oil lubrication in order to assure a long operating life
- Wear rings: they are available both fixed as well as rotating, in various materials, with hardening treatments

## General function data

- Pressure up to 100 bar
- Temperatures from -20°C to +180°C
- Rotational speed up to 3600 rpm.
- Standard flanges: UNI/EN
- Suction port: DN 40-300 - PN 16-25
- Discharge port: DN 25-250 - PN 64-100
- Performance tolerances: ISO9906-3B

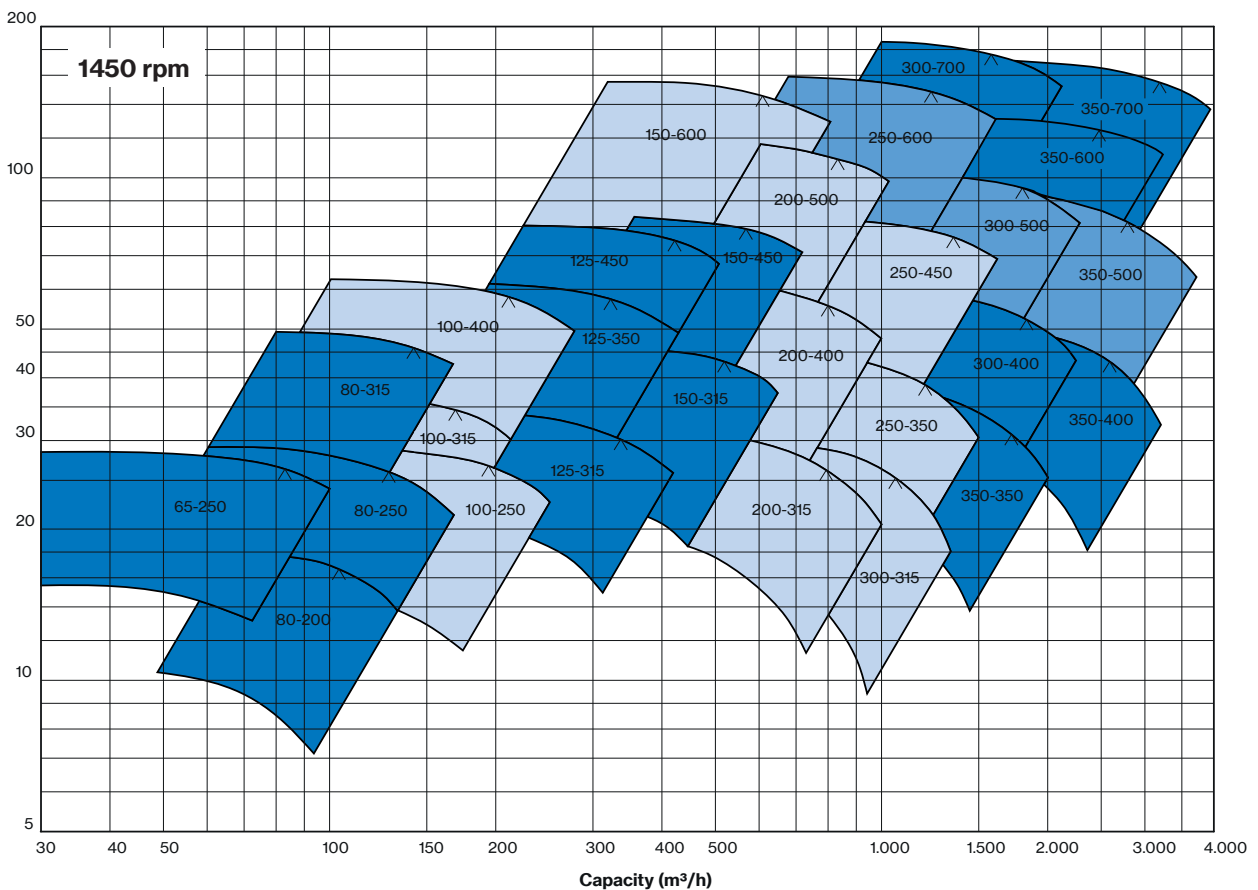

Horizontal axial split case single stage centrifugal pumps with in-line inlet and outlet. The double suction impeller design provides hydraulic balance to enhance bearing life span.

# VP SERIES

VP

Vertical axis pumps recently improved in the hydraulic design with new models and solutions specifically developed for the industry sectors. High efficiency, reliability and extreme sturdiness are the main strengths of the VP line, which is available in versions with electric motor or with “angle drive”/pulley and internal combustion engine. The wide variety of executions and the numerous materials available make this series extremely versatile for use in areas not served by electricity, as emergency or back-up units and in all the main sectors of industry.

## **Applications:**

- Pumping units for fire-fighting systems
- Aqueducts
- Condensate extraction in power plants
- Geothermal plants
- Water treatment on Reverse Osmosis plants

# VP SERIES

## PERFORMANCE RANGE

## Main characteristics

- Capacity up to 1600 m<sup>3</sup>/h.
- Pressure up to 400 m.
- High hydraulic efficiency, up to 82%
- Thrust bearing (grease or oil with optional external cooling) for use of standard motors.
- Axis lines with tapered joints for reliable and durable connection of the shaft.
- Special bushings resistant to the wear of abrasive liquids and temperatures up to 140°C.
- Control unit for electric motor, transmission angle on request.
- AISI 420 stainless steel shaft for standard versions.
- The pump part of VPL models is produced in the standard execution in AISI 304 stainless steel.
- The pump part of VP models is produced in the standard execution in cast iron.

## Technical operational specifics for standard versions

- All the hydraulic performance values below are guaranteed in accordance with standard ISO 9906-Grade 3B.
- The allowable content of solids in the pumped liquid is 100 g/m<sup>3</sup>.
- All the components wetted with liquid are available in various types of steel and bronze alloy.

# TANKS

## UTILIZATION

Interchangeable membrane expansion tanks; the pre-charge pressure in the tank guarantees a water reserve but also reduces the number of startups of the connected pump; the membranes are certified for use with foodstuffs; they may be in EPDM or butyl depending on the model.

## CONSTRUCTION CHARACTERISTICS

Flanges in galvanised steel or AISI 304 stainless steel. Tanks in carbon steel coated with powder paint or in AISI 304 stainless steel.

Pre-charge valve with protective cover.

# CABLES JOINTS

## Kit GC series

Junction cable kit with heat - shrinkable tubing.

For a professionally made junction it is recommended to use the "Kit GC", it has excellent requirements in terms of electric, mechanical and water resistance. This kit is composed of: crimp wire connectors in tinplated copper, thin wall heat-shrinkable tubing to cover the conductor of the cable, a strip of Scotch 2547, one of Scotchfil and medium wall heat-shrinkable tubing to cover the junction. It is recommended to seal the two end points of the sheath with a PVC textured insulating tape.

# LEVEL PROBES

## Kit K3SL series

Level Probes Kit consist of 3 electrodes model K3SL. Single pole probe used for level control in wells or storage tanks.

It made of an AISI 303 stainless steel electrode, a plastic (PPOX) holder and a cable gland.

A seal ring and the tightening of the cable gland PG7 prevent water from entering the cable terminal connector and causing its oxidation.

Cable connection: screw.

The external cable diameter must be 2.5 to 6mm/Ø0.1 to 0.24" to warrant perfect sealing.

Maximum connection cable section: 2.5mm<sup>2</sup>.

Maximum operating temperature: +60°C.
